

HID Global Partners with Port Solution Integrators to Provide The Industry's First All-In-One Handheld Device and iCLASS SE Reader

News Highlights

- Port Solution Integrators joins HID Connect partner program and integrates iCLASS SE Reader into its Real ID handheld device for access control and biometrics verification
- Combined solution supports multiple technologies, including iCLASS Seos, iCLASS SE, iCLASS, MIFARE and Prox
- Rugged solution also features WIFI, Bluetooth and wireless wide area network

IRVINE, Calif., April 30, 2013 – [HID Global](#)®, a worldwide leader in secure identity solutions, today announced that Port Solution Integrators (PSI) has joined the HID Connect partner program to integrate iCLASS SE Reader technology into the PSI Real ID handheld device. The new solution is the industry's first rugged handheld computer for access control that supports multiple smart card technologies, including iCLASS Seos, iCLASS SE, iCLASS, MIFARE and Prox, to provide organizations with a flexible and portable system for identity verification. PSI will demonstrate the Real ID at RFID Journal LIVE! 2013 on April 30 - May 2 at the Orange County Convention Center in Orlando, Fla.

The iCLASS SE Reader Module is part of HID Global's award-winning iCLASS SE platform and is designed for system integrators, OEM's and solution providers to integrate contactless smart card technology reading capability into their products. The integrated Real ID and iCLASS SE Reader solution is a handheld computer that operates when connected to the network or as a standalone device to authenticate and verify a credential holder's identification and access levels via a dual stage process using smart cards and biometrics identity verification.

"HID Global is pleased to integrate our iCLASS SE reader into the new PSI handheld device to enable the solution to address the wide range of technology and security requirements within an organization," said Kerry Reid, vice president of HID Connect with HID Global. "The new solution provides an open platform that enables customers to use a full range of credentials, from legacy smart cards to NFC-enabled smartphones for mobile access control in the future to meet evolving customer requirements."

"Bridging the gap between fixed access control systems and the growing needs of today's mobile enterprise environment, our Real ID handheld is designed to provide state-of-the-art security with an unparalleled capacity to verify an identity wherever it is needed. The solution also supports future applications such as healthcare for patient validation, maintenance and asset tracking and more," said David Lindquist, International Director of Sales and Marketing with Port Solution Integrators. "The Real ID handheld is now

even more powerful than ever with the increased interoperability and other features offered by HID Global's iCLASS SE Reader.”

The Real ID handheld device also supports Transportation Worker's Identification Credential (TWIC) and/or a Department of Defense Common Access Card (CAC) credential and features WIFI, Bluetooth and wireless wide area network (WWAN). A finger print, pin, and photograph may all be verified by the Real ID handheld at will or in conjunction with federally mandated MARSEC and other security threat levels. In addition to supporting multiple credential technologies, the iCLASS SE Reader Module supports the integration into U.S. Government applications. The module is PIV II compliant with FIPS-201 certification and it is listed on the GSA contract.
